

## **PROBLEM REPORT**

We debugged the problems which was being generated. Our code is working properly and is now not generating any know errors, if any problem occurs while running and testing please let us know.(Please close all the terminals and run make to go to the original configuration, in case of any typing error or if the system stops working).

If you encounter any errors please go to the parent folder, PeerToPeer (in case of bus topology) or StarPeer(incase of star topology), open the terminal inside that parent folder so that you are in the same folder in the terminal , and run “make”. This will reset all the changes and all the configuration files and peers are fresh and new.

**Thank you,  
Group 6**
